

Luxury Hotel Website Development Prompt

Create a premium, modern, luxury static hotel website with a strong focus on performance, SEO, elegant UI/UX, smooth animations, and responsive design.

Technology Stack

- Next.js (latest stable version) with TypeScript and App Router
- Tailwind CSS
- shadcn/ui
- Framer Motion for subtle and elegant animations
- Zustand only where global state management is actually required
- Next.js Image component for optimized images
- Use SSR, SSG, and CSR appropriately following modern Next.js best practices

Website Type

- This is a static informational Indian hotel website (Name: Raj Havelli).
- Do not add booking functionality, payment gateway, authentication, login/register, database, or complex backend features.
- The website should showcase the hotel, rooms, services, gallery, and contact information.

Required Pages

- Home – Hero section(Crousel), hotel introduction, featured rooms, services, gallery preview, testimonials, and CTA sections.
- About – Hotel story, philosophy, mission, values, and luxury experience.
- Rooms – Superior Room, Deluxe Room, Signature Room, and Luxury Suite with images, descriptions, and amenities.
- Services – Restaurant, Wellness & Spa, Swimming Pool, Fitness Center, Concierge, Private Events, and luxury experiences.
- Gallery – Responsive premium gallery with optimized images and lightbox functionality.
- Contact – Address, phone, email, social links, contact form UI, and location/map section.

Design Direction

- Use the provided screenshot as the main design inspiration.
- Create a premium Indian luxury hotel aesthetic.
- Use elegant typography, generous whitespace, large imagery, and sophisticated layouts.
- Primary brand color should be inspired by the deep luxury green/dark teal visible in the screenshot.
- Use white, warm off-white, light beige, and soft neutral backgrounds.
- Use only LIGHT THEME. Do not implement dark mode or a theme switcher.

Navigation & Footer

- Create a responsive sticky navbar with: Home, About, Rooms, Services, Gallery, and Contact.
- Include an elegant responsive mobile menu.
- Create a large premium footer inspired by the screenshot with hotel details, room links, quick links, social icons, copyright, privacy policy, and terms & conditions.

Animations

- Use Framer Motion for subtle fade-up, image reveal, text reveal, hover effects, and section transitions.
- Animations should feel smooth, elegant, minimal, and premium.
- Avoid excessive or heavy animations.
- Respect prefers-reduced-motion.

SEO

- Use Next.js Metadata API.
- Create unique title and description for every page.
- Add Open Graph and Twitter metadata.
- Add canonical URLs, sitemap, and robots.txt.
- Use semantic HTML, proper heading hierarchy, optimized alt text, and Schema.org Hotel/LocalBusiness structured data where appropriate.

Performance

- Prioritize Static Site Generation (SSG) and Server Components.
- Use Client Components only where necessary.
- Optimize all images with next/image.
- Use responsive image sizes and lazy loading for below-the-fold content.
- Use priority loading only for important hero/LCP images.
- Use next/font for font optimization.
- Keep JavaScript minimal and use dynamic imports for heavy interactive components.
- Avoid layout shifts and unnecessary dependencies.
- Target excellent Core Web Vitals, Lighthouse performance, SEO, and accessibility scores.

Code Quality & Architecture

- Use clean, modular, reusable, TypeScript-first code.
- Create reusable components for Navbar, Footer, PageHeader, Hero, RoomCard, ServiceCard, and Gallery components.
- Avoid duplicate code and large monolithic components.
- Store rooms, services, navigation, and gallery content in structured data/config files.
- Use shadcn/ui where appropriate but customize it for a luxury hotel look instead of a generic dashboard style.

Final Goal

- The final website should feel: Luxury + Minimal + Elegant + Editorial + Premium Hospitality.
- Do not create a generic template-style website.
- Make it feel custom-built for a high-end hotel brand.
- Deliver a fully responsive, SEO-optimized, fast-loading, production-ready Next.js multi-page static hotel website.
